

Memrise is an online learning tool with courses created by its community.

The courses were mainly used to teach languages, but are now also used for other academic and non academic subjects (such as trivia, video game trivia, and pop cultural).

Memrise is based on several important scientific discoveries about how we learn.

- 1) **Mnemonics and memory aids** promotes encoding- encouraging the brain to do more by engaging the imagination and therefore making more durable memories.
- 2) **Memrise makes use of Spaced Repetition**, helping you review words at spaced intervals to help you maintain them in memory in the most efficient manner possible. Reminders space out in time as your knowledge for a word gets deeper, meaning you don't forget, but don't waste time reviewing what you already know.
- 3) **Memrise exploits the Testing Effect**, which shows that by actively recalling a memory, you strengthen it. Because the degree of strengthening to a memory correlates with the difficulty of the test, Memrise automatically makes the tests more difficult over time, again helping you boost your learning in the best way possible.

Adaptive learning tech

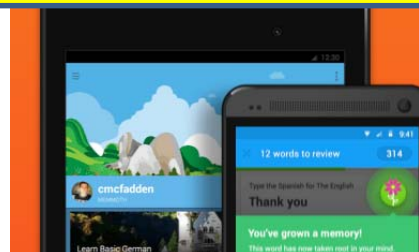

Memrise uses clever science to adapt to your personal learning style and performance. So you learn fast and never forget!

Compete with your friends

Learning's even better when you're beating your friends

No excuse not to revise! - download the mobile app

Take Memrise with you

Take your learning on the go, with an offline mode also available for learning in those hard-to-reach places.
